

3D Animations

3D animations are a very valuable tool. They enable the planner or builder to illustrate planned or existing space visually and realistically prior to the actual construction phase. The shots can appear realistic and thus replace a costly sampling!

In the animation you can immediately see:

- that the ambulance does not have enough space in the ante-room lock.
- the door is obstructing the mission, which you can immediately see in the animation.
- the rescue service staff have enough space in the ante-room lock
- the door opens perfectly
